DETAILED ACTION

Allowable Subject Matter

Claims 66 – 70, 75 – 78 and 91 – 93 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art teach various methods and devices for performing chemical manipulations using electrical phenomena. The cited prior art neither teach or fairly suggest an apparatus for exposing a magnetic microparticle, wherein the apparatus comprises: a diamagnetic substrate, which is for the levitation of said microparticle, comprising a workplace defining x – y coordinates; a plurality of stations located at different known workplace x – y coordinates, wherein each station comprises a chamber for holding a selected liquid, and a chamber opening forming a gas/liquid interface when the chamber contains such liquid, wherein each station is adapted to carry out or participate in one or more selected operations; a driving structure positioned adjacent said workplace, wherein said driving structure comprises drive elements selectively energizable to cause an interaction between selected energized drive elements and one or more selected microparticles, to move said microparticles between selected workplace x – y coordinates, with said microparticles in a levitated state, through interaction of said drive element with said microparticles' dipoles, and to cause an interaction between selected energized drive elements and one or more selected microparticles, to move said microparticles across said gas/liquid interfaces at said stations; and a controller operatively linked to said drive elements for energizing said drive elements to move said one or more selected microparticles between or among selected stations, and in and out of stations, to accomplish a desired laboratory-activity.

The cited prior art neither teach or fairly suggest an apparatus for use in performing multi-particle operations, wherein the apparatus comprises: a diamagnetic substrate having a workplace defining x – y coordinates and a plurality of workstations; a plurality of magnetic microparticles adapted to move over the surface of said workplace between and among workstations; a driving structure positioned adjacent said workplace, wherein said driving structure comprises a plurality of drive elements selectively energizable to move a linear train of selected microparticles coordinately between selected workplace x – y coordinates, with said microparticles in a levitated state, through interactions of said drive elements with said microparticles' dipoles; and a controller operatively linked to said drive elements for energizing said drive elements to move said microparticles between or among selected x – y coordinates to accomplish said multi-particle operation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
